
[SOLVED] question about poistion

Posted by kwickcut - 2011/09/13 19:09

i am not sure i am correct on this please correct me if i am wrong.

in joomla 1.5 i have 2 carousels on 2 seperate pages and have found that i can not use the same position on both pages

page 1) games

page 2) games

if i do i end up with both carousels on both pages so what i have done is made a second position like below

page 1) position games

page 2) position games1

is this correct or did i miss something?

also does the update for 1.7 work the same way meaning i have to add new positions for each new page and carousel.

the reason is ask is i am the president of the local booster club for our high school football team and we like to have all the games pictures up on the site but i have 5 years worth of pictures to load with 20 games a year (10 varsity and 10 junior varsity) that would be 100 positions i have to add not to mention camp bbq sr dinners and so on

if i have to add all the positions maybe you have another program that i could use one position

(EDIT) same question for lightbox as well

thanks for any help

Hello,

If you want to use the same settings for all carousel and only change "Image path" parameter, you can use "Modules Anywhere" plugin and override necessary parameter(s). You can read about it [here](#).

ok i have read and installed the module from this article i have tried using the following code

```
{module 28|path=Games/clayton jv 2011}
```

i see the carousel along with the buttons all works until i click on a picture then i get a 404 - Category not found error and no lightbox

i have the modules anywhere activated and lightbox activated as well

any help this is the site link

thanks for any help

It seems this problem with SEF. Could you provide temporary access to your J! backend by email so we could investigate the issue?

I have the issue resolved as far as the light box not working so no on that part later today maybe when I add the second carousel if things go wrong..

thank you

UPDATE....

this is what i have found and it has worked for me with no problems on any pages..

i have installed the module System - Modules Anywhere and have it published along with System - ARI Sexy Lightbox

and in plugins i have one instance of carousel published and in Lightbox integration i have selected ARI Sexy Lightbox and have nothing in the directory's

now on my page i want to create i use the following code
{module 28|path=my directory for my pics}

module 28 refers to my ARI Carousel ID # 28

and

my directory for my pics is what it says pictures/alblem1

i have 3 pages with carousels running on the site rite now and only have one carousel plugin published and and the 2 modules System - Modules Anywhere and System - ARI Sexy Lightbox this is the code pages 1 through 3

```
{module 28|path=pictures/page1}  
{module 28|path=pictures/page2}  
{module 28|path=pictures/page3}
```

with this setup i have one carousel per page all using the same position

thanks for all the help
