## Installation Problem

Posted by Salford IT Help - 2011/10/03 11:05

---

I use 1.5.XY for my main website and had no problem installing the module. However, then when trying to install the module again on a different website also using 1.5.XY with JA-Zinc template i get this error...

JFolder::create: Could not create directory  
Warning! Failed to move file.

Working on [www.salfordithelp.com](http://www.salfordithelp.com)  
Won't install on [www.recreationrecords.com](http://www.recreationrecords.com)

Hello,

It seems Joomla! is configured incorrectly. You can read more about it [here](#).

Regards,  
ARI Soft

Problem Solved. The log and temp directories still pointed at the former server location. Your response was so quick i initially thought it was an auto response about my original submission.

Thank You - I am very impressed with Ari-Soft
