
background image missing

Posted by manch - 2011/11/02 11:21

I have problem with background image. I search for answers here but i didn't find the right solution. Is it possible to put here a correct example with code? For example the demo site is good for me but i need some instructions for bg image. I am not able to send the site adress because its on my local machine. Thanks any help!

ok i found the answer...everything was correct except the / "backslash" character!
at the path to background image: images/something/bg.jpg

but the image path i use: \images\something\category1

and it works with this!
