
carousel as menu

Posted by turbinee - 2011/11/17 17:50

Hi Guys,
Great module bar-none!
Great looks too.

I have a problem I was hoping you'd solve;

I want to use the carousel as a menu, and once clicked on the thumbnail to jump to a page I've linked in the .ini file. However, now when I click on the thumbnail it opens up the thumbnail window with its formatting, and I want it to go straight to the linked page.

I would imagine that it is possible to do it this way, but dont know what exactly to change to make it happen.

this is the site am working on and the carousel:
<http://industrialwalnut.com/hytinc/index.php/home>

I've programed the carousel with the .ini file at the "upright" thumbnail only to test it out. Right now it opens up a frame that you have to scroll and such, and I want it to go straight to the linked page.

How could I do it,please assist me,
Thanks,

George

Hello,

If you want to load links associated with carousel images into main browser window, set "Lightbox integration" parameter to "None".

Regards,
ARI Soft

Magical, thank you!
Very very simple.

George
