
Links from pictures opening in full screen.

Posted by vibroheaven - 2011/12/31 15:02

Hi everyone,

First I would like to say what a great mod this is but I have one problem, when I click on any of my pictures the link opens in a full window instead of being in my joomla template, I have tried all the options available with no luck.

I am using Joomla 1.5.25.

The website is www.vibroheaven.co.uk/testing please note that this is an adult site!

Thanks in advance.

Hello,

Sorry, but your links are associated with external links (not links from your site) why is it should be shown in site template? Probably do you want to show links in a lightbox?

Regards,
ARI Soft

Hi,

thank you for your reply, but your answer has confused me!

Are you saying it is not possible to use cloud carousel to do this?

And is it possible to do this using a lightbox?

Thanks

If you want to show a remote page wrapped with your site template, you can create an article and load an external link into in created article with HTML tag. Then assign created article with a carousel image. For example if created article has ID = 15, a link will look like:

index.php?option=com_content&view=article&id=15&tmpl=component

If you provide a temporary access to your J! backend by email, we will help to configure the module.
