## Thumbs not showing

Posted by Pzz - 2012/01/04 19:42

---

Hi,

I had the carousel turning with thumbs on my site in a /jupgrade-folder (to get from J15 to J17).  
I installed the website on my homserver (same folders, same DB) and it also works.

And now I removed my old J15-site and copied the J17 there (same copy of files and data as above).... and I see an empty carousel turning. When I click I get the images but I don't see the thumbs. Just an empty frame with a image icon (you see when an image isn't present).

I took a look at the source (view-source), and found refs to the images and thumbs like this:

... and found the problem: the thumbs are not present in de /cache -folder. Some others files are there with the same name-syntax, but not the eleven I like to show.

How can I refresh / recreate these thumbfiles?  
I don't use the INI option. Just the default.

Thanks in advance. [http://www.ari-soft.com/images/fbfiles/images/empty\\_carousel.gif](http://www.ari-soft.com/images/fbfiles/images/empty_carousel.gif)

Hello,

Check that /cache folder has writable permissions and clean it.

Regards,  
ARI Soft

:woohoo: Thats a fast reply! And it works!

Thanks.
