## Pause on Mouseover

Posted by benji201 - 2012/01/06 21:56

Hi,

Firstly, thank you, this is an awesome extension and I use it as a logo rotator with links to our suppliers as well as using it as a form of menu navigation.

Here is my question/problem... I have it set on auto-rotate so it pauses when I mouseover it.... this is great, but the issue comes when I move to the arrow buttons to either skip forwards or skip backwards through the carousel. As soon as the cursor is over the arrow buttons the "pause on mouseover" stops working. This is an issue because if i try and skip through to a specific image it will all of a sudden skip through as the auto-rotate cuts in.

Any suggestions on what I can do about this or is it just one of those things that has to be accepted?

Once again, great extension and thanks very much.

Hello,

It is not an issue, the extension is implemented in that way.

It doesn't really make sense for the auto-rotate to start working when I hover over the buttons. What is the use of direction controls if half way through using them the carousel suddenly rotates, causing you to skip the image you wanted to stop on?

My question... Is there a way I can have the "pause on mouseover" continue to work when I am hovering over the directional buttons?

Any Help would be greatly appreciated

Download and upgrade the module. After this clean browser's cache. It should help.
