[RESOLVED] Problem with multi-language description
Posted by dionysos - 2012/03/02 20:35
_____

Hi,

I have a little problem with the multi-language description. Maybe i don't have really understand how to use the .ini file. I need to translate the description in english (the main language is french). So i have create a file name aricloudcarousel.en-BG.ini. Where did i need to place it? On the same folder of the current aricloudcarousel.ini? On other different folder?

Could you help with some explanations?

Thank you again.

Best regards.

Denis.

_____

Hello,

Name should be aricloudcarousel.en-GB.ini instead en-BG. Place the file to folder with images.

Regards,
ARI Soft

hi,
it's a mistake type :)
I have correctly called the file aricloudcarousel.en-GB.ini, but it doesn't work (nothing is displaying)

Best regards,
Denis

i think there is a misunderstanding by myself.
I have two languages on my website (french and english). For the current translation, i use Joophish. But the .en-GB.ini can't work with joomphish, can it?

Did you have an example of multilanguage use with ari cloud carousel to show me?

Thank you for your help.

best regards,
Denis

_____

What you mean it doesn't work with JoomFish? Create INI file manually and place it to folder with images. If the module doesn't get data from this file when English language is active, we can investigate this problem if you provide a link to a page where we can see this problem and a temporary access to your J! backend by email.

Regards,
ARI Soft

_____

Hi,

I think I have solve my problem. Maybe it's because i was made a copy/paste of the current .ini file to create the .en-GB.ini file. I had create a new one with the translation and now it works.

Thank you again.

Best regards,
Denis
