## Auto rotate stops

Posted by rapple - 2012/06/14 21:33

---

Excellent product - does exactly what I want.

Thank you

However having just been through most of the options trying to see visually what they all do I noticed that on my site if I use lightbox integration to view links, the carousel continues to auto rotate. If I don't use lightbox integration clicking on a link opens a new tab/window as per configuration but the auto rotate in the original windows stops and there's no way to restart without loading the page. It seems to be OK most of the time if I open in same window but I think that I have also seen this fail.

Is this by design, or something about the way my site is configured?

Site here: Crudwell Bike Ride

then click on the 24 hr Bike Ride Menu item.

Only other question is, is there any way to stop images without links from displaying the image path. i.e. don't display them in a box /new window, just disable any action when clicked?

Thanks again,  
Rick

Hello,

Download and upgrade the module. After this set "Stop auto-rotate on mouse action" parameter in module settings to "No".

Regards,  
ARI Soft
