Ini file + RokBox - Autoloads [LINK]...

Posted by send2jeremy - 2012/12/03 08:08

_____

I have tried all kinds of options. I would really love to figure out the answer to this but it may end up a suggestion. here goes:

RokBox displays the Description correctly, but automatically loads the link into the lightbox. I can not tell what side the problem exists on but I can tell you this: I need it to just show the picture and provid the as just a link or the as the href target of the description if the description is clicked in the lightbox.

This would allow me to show the blown up version of the image as well as provide a link the user can elect to follow to get more stats or a webpage once they confirm the full size image is the correct one in the lightbox (RokBox)

_____

Hello,

It is not possible to load a large image into a lightbox and if a user clicks by a link into description, load an external page into the lightbox. If links are defined in section of INI file, the defined link will be loaded into a lightbox when a user clicks by a carousel image.

Regards,
ARI Soft
