---

Link:

<http://www.bachpanglobal.com/pages/infrastructure>

The background image is of much bigger size than the carousel.

If I decrease the size of background image, it shifts to right.

How do i give the proper size and position to the background image.

Regards.

Hello,

You can read how to change carousel size here.

The position of the carousel is perfect within the content area, but the position of the background image is going out of the content area.

I also tried to install ARI Sexy LightBox lite, but it did not accept the background color.

"ARI Cloud Carousel" supports integration with "ARI Sexy Lightbox", not with "ARI Sexy Lightbox Lite".

But if you see the page, you will see that the image is out of tune with the carousel.

If I shift the carousel, it moves into Module position, disturbing the modules.

I need to position the background image.

<http://www.ari-soft.com/images/fbfiles/images/bk1a.jpg> The background image is attached.  
Although I have kept the size of the background image as that of the X/Y radius , but still it is going out.

Set "Width" parameter for the carousel to appropriate value. In your case it is 500 (instead of 800).

Thanks.  
It really looks good.
