
Thumbnails based on height rather than width

Posted by mikepwp - 2013/02/28 00:38

Is there anyway to get the carousel thumbs to be based on height, rather than width (and keeping aspect ratio)? I have several different size images, and I would prefer if I was able to set a height that I knew would be good for all of the images. The problem I'm having is when I set the height (to say 90 or so) and delete the width, when I save, the width is saved as 150 (it keeps coming back regardless). Any suggestions as to how to solve this issue?

Hello,

Enter thumbnails height in "Thumbnail height" parameter in leave "Thumbnail width" parameter empty.

Regards,
ARI Soft

Actually I figured out what was going on, in the mod_aricloudcarousel.xml file the thumbnail height was set to default to 150, so everytime I saved with nothing in the width box, it put 150 there.

So I found this line:

and changed it to this:

Now it works great, thanks for a wonderful module!
