
Picture Title as link

Posted by jaguarxxl - 2013/03/17 17:37

actually the picture is the link to a target which I define in the ini file.

But any Link is opened in the lightbox. I want to have the links on the title of the picture or on the description. And it should open the link in a new window.

=====

You can use HTML code in titles and descriptions. For example:

```
image01.jpg="title"
```

```
image01.jpg="description"
```
