## Problem space between the title of the article...

Posted by manolito44 - 2013/11/09 17:54

---

Hello I installed carousel cloud and Ari ARI Sexy light box successfully but I display a small problem. In fact the title of the article appears much lower than normal, I wanted to change this by modifying the css "# rt-mainbody-surround {padding-top: 110px;}", the result was conclusive, but it changes the other items that do not have the module ari cloud carousel. Do you have an idea or comes the problem. website address is <http://www.comptoirdelevesque.fr/index.php/services/la-carte-des-vins/vin-rouge>

Thank you for your help and thank you also for these modules are very well done

Hello,

Article title is shown outside "ARI Cloud Carousel" module and the module doesn't affect on position of the title.

If you want to change position of the title only for specific article, it requires to modify site template so it is added a specific CSS class for this article.

---

It seems other page contains "breadcrumbs" module above a title and it occupies some space, but the module is not used on the page with the carousel.

---

Hello,

so I just removed the module on these pages to see if it affected the result but I just put it back and the space between the title and the top of the article always sent this. Do you have another idea?

Thank you for your help

---

Remove empty lines from "Image path" parameter in "ARI Cloud Carousel" module settings.

Thank you very much for this idea was eventually found difficult to remove because of ghosts ... online! lol

Thank you again for your work and in addition a Sunday .... lol, when the site is finished I will do an article on its release with a link to your two modules that I used ...

resolved
