
Positioning

Posted by denelan - 2013/12/08 19:03

I've been trying out all kinds of settings to get the carousel positioned better (higher) in the area. What ever number I use with Y pos, the top or the bottom get cropped.

I have style parameters at 650 for width and 400 for height. All X and Y radius and pos are set to default; 0.

What kind of numbers have what effect on Ypos?

<http://www.schildklierorganisatie.nl>

(the carousel is only placed on the homepage)

For example set "Y pos" to 40 and "Radius Y" to 100
