ini-file: trying to link directly to another pictu
Posted by hinki - 2014/02/20 06:45

_____

Hello and Good morning

I am new here and first of all I want to thank you for this wonderful great module. It was easy to install and works fine for me from the first moment.
So far so good Iâ€™ve reached a point where I need help. I am using Joomla 2.5.18.

Question: Is it possible to link directly to another picture in the LINK-part in the ini-file?

Example:

\
1.jpg=â€žhttp://mypage.com/images/test/example.jpgâ€œ\

The link works directly given to the browser but given with the ini-file it leads to a 404-error.

The problem:

During the way through the ini-file the link is changed to http://mypage.com/images/test/example.jpg/ . The slash at the end causes the 404-error.

Can you please help me finding a solution?

Have a nice time and thank you for your attention.

Best regards

==

_____

Hello,

It doesn't require any / in INI file. It should look like:

1.jpg="http://mypage.com/images/test/example.jpg"

Regards,
ARI Soft

_____

Thank you for your quick answer.

Sorry if I am not clear or if I donâ€™t get you right.

The carousel works fine with (in the example) 1.jpg.

But clicking on 1.jpg I wish example.jpg to come up.

Am I wrong that this has to be realized via the LINK section in an ini file?

Regards,

hinki

_____

Links which are defined in INI file can be opened into a lightbox, loaded into a new window in browser or opened in the same browser's window (in this case the page will be reloaded and only the selected links will be loaded).

_____

Thank you for this fine description.

Iâ€™ve tried all these application possibilities with the same result.

Error 404

Even so I tried to open the link (http://mypage.com/images/test/example.jpg) in the browsers Opera, Safari, FireFox and Chrome - it works without any error.

The result of my investigations is, that when I send the link through ARI Cloudcarousel it puts a slash (/) at the end of the link and that causes the 404 Error.

Please can you help me.

_____

Thank you for your attention.

You can see it at:

http://leo-loewenberg.de/LEO_Coaching/sa_ndb_ox/leo/was-leo-fuer-sie-tut

if you click the first picture - Anleiten- you will see it.

The ini file entry is:

\
Anleiten.jpg="http://leo-
loewenberg.de/LEO_Coaching/sa_ndb_ox/images/Karussell/Ziel/Anleiten_Frau%20mit%20Kopftuch2_kl_Text.jpg"\

_____

As we wrote before, it doesn't require any "\" symbols in INI file so remove it from INI file.

Regards,
ARI Soft

_____

Thank you very much - it works.

I donâ€™t know where the "\" symbols came from - but I found them in one of the ini files and always had worked with them.

Anyway - it is my mistake. So please accept my apology.

Have a great time :)

Best regards
hinki
