Can\'t get carousel working after installing to 3.x
Posted by markhass - 2014/11/19 17:50

_____

I could use some assistance in figuring out why, with all the same settings, I am unable to make the module load in my new 3.x template. Works fine with same settings in 2.5 site http://educateusa.com/newdev/ .

_____

Hello,

Where we can see the problem?

Regards,
ARI Soft

_____

Works here www.educateusa.com/newdev joomla 2.5
Won't load here www.educateusa.com/wolf joomla 3.x

I can give login info, but not if this is a public forum.

_____

The site at www.educateusa.com/wolf is now working. The load is fine on all pages except the home page. That I think I can deal with.

Thanks for your support.

Mark.

_____

Looks like I am not as smart as I thought I was. I am still unable to get the carousel to function on the front page, but it works fine on other pages. I tried displaying it on the front page http://educateusa.com/wolf/ in both a template module position, and from within an Article. It still works fine on the Login link.

http://educateusa.com/wolf/
Do you want the login/pw?

Thanks for your support.
Mark

_____

Set "Load jQuery method" parameter to "Local copy".

Regards,
ARI Soft

_____

The module appears to now working when I disable the homepage RockSprocket module.

Thanks
