
Cloud Carusel in articles

Posted by Stockinger - 2015/02/26 18:14

Hi,
I hope my english is good enough :P

I would like to view the cloud carousel in an article. I use Joomla 3.4. maybe thats the problem.

The installing of cloud carousel run without any mistakes, also if i assign it to an existing modul-Position, it works.

If i want to view it in an article, i just get a loading sign permanently.

In my article i tried to use

{loadposition pos-1}

and

{loadmodule carusel}

Before i write it into the editoe, i toggle to the code-mode!

Both methods don't show me the carousel :(

I hope there is someone to solve my problem.

Thanks a lot!

Hello,

Send a link to a page where the problem occurs.

Regards,

ARI Soft

The problem occurs because jQuery library is loading twice on the page. One instance by site template, another instance by Joomla! Load it only once (via Joomla! API) and set "Include jQuery" parameter to "Yes" and "Load jQuery Method" to "Local copy" value in "ARI Cloud Carousel" settings.
