
.ini file placement

Posted by pelyon - 2016/12/29 21:07

Hi,

I created the .ini file to enable linking images. However, when I tried to place the .ini file in the image folder, it was rejected, saying file type not accepted. Where or what folder does this .ini file need to be placed? I am running a joomla 1.5 site. Thanks!

Hello,

If you want to upload CSV files via Joomla! Media Manager, open "Content -> Media Manager" page on Joomla! backend, click "Options" button and see "Legal Extensions (File Types)" parameter. Add csv file extension to this parameter.

Regards,
ARI Soft
