## Rounded Corners

Posted by HarryWales - 2010/10/20 14:12

---

I have just installed ARI Carousel on a site I am building after seeing your demo...

Can you tell me HOW to get rounded corners on the thumbnails?

Do I have to round the corners of all the images FIRST? or is there a way to make the Carousel round them for me?

I have is set up to use ARI Sexy Lightbox which I nought this morning - but all my thumbnails in the carousel are all square-cornered.

Hello,

'ARI Cloud Carousel' doesn't provide this ability. On our demo site the module uses thumbnails with rounded corners which were created before using it in module.

I tired inserting a "thumb" folder within my images folder - but to get round corners they are all PNG files - while my main folder contains JPEGs. Have inserted the thumb/{\$fileName} into the thumbnail path - but the carousel still shows square thumbnails???

Could you provide temporary access to your Joomla! backend and link to page where you try to use the module by email that we can investigate this problem?

Not possible - am doing it in my office on XAMpp localhost - am not allowed to develop sites on my server.

My main images (JPEGs) are showing correctly using the path:  
"images/stories/tp-carousel" and the INI file in there is getting all the names/descriptions right - so far so good.

But although I have put rounded-corner PNG's into the subfolder "images/stories/tp-carousel/thumb" I cannot get them to display - just getting squared thumbnails instead - which must be getting created by the carousel as there are no square thumbnails in the system at all...

Is there a special setting if you are using JPEGs for main images and PNG for thumbnails? Do both sets of images have to be the same file format?

## Re:Rounded Corners - UPDATE

Posted by HarryWales - 2010/10/20 15:38

---

If I remove the PNG thumbnails (with rounded corners) and replace them with JPEG rounded corners then the path thumb/{fileName} works perfectly

But obviously rounded corner Jpeg's are not satisfactory

So this issue is not with Paths, this proves the paths are ok - but for some reason it does not see my PNG thumbnails as being related to the main Jpeg images...

MUST be missing something here - you are using PNG and JPEG in your demo

replacing the round cornered PNG thumbs with round cornered JPEG thumbs works ok - so this is not a path issue. My thumbs path is working fine - but it will not read PNG files from there with the same names as my main Jpegs

---

It happens because {fileName} predefined variable contains file name with extension. We'll improve the module and add {baseFileName} variable which will contain file name without extension. It helps to specify path to thumbnails in the following format: thumb/{baseFileName}.png

PS: We'll provide update within several hours.

---

Download and upgrade extension please. New version provides ability to use {baseFileName} predefined variable which contains original image file name without extension.

DOne that - no difference

Used "thumb/{\$baseFileName}" as the path - still getting square images instead of the rounded PNGs in that folder

I assume you DID mean download the Carousel extension? not the Sexy Lightbox extension?

---

Read our previous post please. Use "thumb/{\$baseFileName}.png" instead of "thumb/{\$baseFileName}".

---

PS - using thumbs/{\$baseFileName} means that I now can't even get the rounded jpeg thumbnails to work either

I have set up TWO folders:

just for testing

One is images/stories/tp-carousel

Other is image/stories/carousel

BOTH have an INI file (identical)

BOTH have a "thumb" sub-folder

In one of the thumbs folder I have rounded PNGs

In the other thumbs folder I have rounded JPEGs

Switching between the twqo now shows that NEITHER set of thumbs will show using the variable you mention above

BUT - if I use {fileName} instead I CAN get the jpeg thumbs to display.

Maybe I have downloaded the wrond version of the extension? I just got it from your main products page as I did earlier today)

THAT did the trick

MANY, MANY, MANY thanks - your support is EXCELLENT !!!

Don't use "thumbs/{\$baseFileName}" value, use "thumbs/{\$baseFileName}.png" or "thumbs/{\$baseFileName}.jpg". In other words specify thumbnails extension after {\$baseFileName} variable. One note, file extension is case-sensitive so check that thumbnails have "png" extension not "PNG", "PnG" or etc.
