
Little layout issue

Posted by undercash - 2010/10/20 23:35

Firs thanks for this module. It does exactly what I was looking for and pretty easy install (missing a better tooltip for the .ini file maybe ;))

as I show in the picture, I have too much space between the images and the top of the module position. I tried with another template and it s same.

I am not exactly sure what I should edit to make the top white space smaller so it fits better in my website

any ideas?

thanks! http://www.ari-soft.com/images/fbfiles/images/top_space_ari_caroussel.png

Hello,

Could you provide link to page where we can see the carousel on your site?

Regards,
ARI Soft

Hello,

Well for the live site' it's on a private page but I got same issue on my test site that can be reach here

Play with 'Y radius' and 'Y pos' parameters. By default it's calculated in the following way:

'Y radius' = / 6

'Y pos' = / 6

Calculate these values for your case and increase 'Y radius' and decrease 'Y pos' parameters.

Really, it's perfect! Prob best support I ever seen and of course, excellent module

Thanks again!
