
Carousel is hiding drop-down menu items

Posted by HarryWales - 2010/10/21 13:06

I want to have my Carousel in a module below the main drop-down menu. But unfortunately, when anyone uses the menu, the drop-down menu items go BEHIND the Carousel - making the menu unusable.

Anyone know of a fix for this?

We suppose this problem with "z-index" CSS property but it's hard provide a solution without viewing the page where this issue occurs. If you can't upload your site to online server, open the page in a browser, choose 'File -> Save Page As' menu item in browser's menu, choose 'Web Page, Complete' method, save all files, archive it and send us by email that we can reproduce this issue no our test machine.

Actually I have just "fixed this by changing the menu system to use a "split" menu, so the master menu does not drop down over the Carousel.

SO now my ONLY problem left for this site is the "Yoo Search" box on the main menu bar - its results go behind the carousel as the menu did earlier

Saving the page as HTML from a PHP/MySQL site just produces a mess that looks NOTHING like the site I am working on

Could you send archive with files which were saved by a browser?

You can try to add the following CSS rule to 'CSS Styles' parameter:

```
{ $id }_wrapper
{
  z-index: 1;
}
```

You are a genius!!!

That solved both the drop-down menu problem AND the YooSearch results problem - both now put their drop-downs in FFRONT of the Carousel.

I am seriously impressed.

THANK YOU SO MUCH!

I am having the same problem and have tried changing the z-index in several places but still haven't been able to fix it.

Here is the development link:

<http://www3.techwake.com/>

I would really like to have the carousel display behind the menu (right now when people roll over menu it displays below the carousel).

Hello,

The page doesn't contain "ARI Cloud Carousel" module.
