## aricloudcarousel.ini

Posted by KTA - 2010/12/17 12:58

---

Hello!

Could you please help me? I would like to use this carousel with multi-language support, but the language.ini is not appeared. (Now I have joomla 1.5.22)

The translated menus appears and the 2 buttons for left and right. I get to show the carousel in mainlanguage only. The multi- language is setting to "Yes" in modul, the 3 .ini language files are in one place with the images. (I have used for this /images/stories/food folder and this root is in modul description inserted)

The plugin is also activated.( I see the same problem in IE and Firefox)

Best regards

Hello,

"Support multi-language description" parameter is used if you want to use different descriptions (link) for image for different active site language. You can read about it in "Description" field on module settings page:

If you want to have different INI files and load one of them based on active site language, enable 'Support multi-language description' option and create INI files with file name in the following format: ..ini where is base file name without extension which indicated in 'Description file' parameter, is tag of active site language. For example, if active language is 'Russian' and value of "Description file" parameter is 'aricloudcarousel.ini' create file with name aricloudcarousel.ru-RU.ini

Hello!

I have red it and I use your proposal, therefor I have wrote you that "The multi- language is setting to "Yes" in modul,and the 3 .ini language files are in one place with the images". so as aricloudcarousel.de-DE.ini, aricloudcarousel.hu-HU.ini and aricloudcarousel.en-EN.ini

And now, have you other proposal?

Thank you!

Best regards

Try now please. You have set incorrect path to image folder, it should be "images/stories/food" instead of "/images/stories/food". File with English descriptions should have the following name aricloudcarousel.en-GB.ini instead of aricloudcarousel.en-EN.ini.

Hello!

Thank you ! Oh... :ohmy: my Jommfi!

My second problem is:

If, I change the menu for example, I would like to show it in "Choose from possibilities" than I get it 2 times on the page/article.

P.s

I have already had this aricloudcarousel.en-EN.ini before I updated my site and I didn't have problems due to en-EN ending.

Best regards!

Hello,

Do you use "Content - ARI Cloud Carousel" plugin and module is loaded into module position and by the plugin or you have another problem?

Hello!

I would like to have the carousel only one more in the article!  
Now, I have it 2 times in the article. ( Please, see my attached image!)

---

If you load module with help "Content - ARI Cloud Carousel" plugin and don't want to load it into module position, set "Menu Assignment -> Menus" parameter to "None" in module settings.

Hello!

Yes, now is OK for me.

Thank you very much!

Best regards
