
Drag Issues

Posted by natselection - 2011/03/23 01:48

Hello, I can't seem to get the drag feature working. I've tired configuring a few different ways but had no luck narrowing down the problem.

Tried the default template, tried turning the jquery loading on and off on all of the different modules. Tried disabling plugins one by one.

My guess is I am overlooking something simple.

heres the page: <http://nswd.co//iy6j0o>

thanks!

Hello,

We have sent the answer by email. Check it please. In brief, this is the problem with extension for optimization loading of javascript and CSS files which is used by site template. It can't handle external javascript files correctly.

Regards,
ARI Soft

Yep, it was RokZipper, which I completely forgot about that plugin. Disabled that plugin and the drag feature works great. Thanks for the help!
