Image opens after drag&drop

Posted by MartinMue - 2012/03/03 06:57

_____

Hi!

I have a bunch of images on my test site

http://test.hebammen-lichtblick.de/index.php/ueber-uns/praxis

After update to Joomla 2.5.1, when I drag & drop an image it opens in the lightbox immediately after dropping.

That's no real problem but I'm sure it didn't behave that way in Joomla 1.7.3.

(See our live site: http://www.hebammen-lichtblick.de/index.php/ueber-uns/praxis)

Now it's quite difficult for the visitor to sort the images on the canvas.

Do you have any idea how to stop this immediate opening?

But anyway, thanks for this great extension.
Martin

_____

Hello,

Enable jQuery loading in module settings.

Regards,
ARI Soft

_____

Hi and thank you for your answer, but that's not the matter as
- Include jQuery
and
- jQuery noConflict
are both set to "Yes"

And even if I try to turn them off (alternately and both together), when I drag & drop an image it is still immediately opened in the lightbox after releasing the mouse button.

Interestingly: drag & drop still works in Joomla 2.5.1 with "Include jQuery" set to "off", but much less smoothly.

Perhaps, if you tell me another site running Slick Gallery with Joomla 2.5.x, I'll try to compare them.

It would be nice to get this fixed because otherwise, beeing unable to sort the images on the screen, I'd have to choose another gallery even though I'm quite stoked about this cool look.

Best regards,
Martin

_____

Enable jQuery loading and no conflict option and provide a link to a page where we can see described problem.

_____

Here are two links to compare.

On both sites:
Include jQuery: yes
jQuery noConflict: yes
(Full module settings see screenshot URLs)

Test-site Joomla 2.5.2 WITH the decribed issue:
http://test.hebammen-lichtblick.de/index.php/ueber-uns/praxis
Full module settings: http://ScrnSht.com/jgjclu

Live site Joomla 1.7.3 WITHOUT any problems:
http://www.hebammen-lichtblick.de/index.php/ueber-uns/praxis
Full module settings: http://ScrnSht.com/pwjhos

_____

jQuery is not loaded by the module on provided page. It can be a problem with a 3rd party extension or Joomla! cache.

We can investigate this issue if you provide a temporary access to your J! backend by email.
