two pages - two images locations
Posted by gomi_at - 2014/05/27 22:19
_____

Hi there,
a question:

I use arislick with sexylightbox on one page

{loadmodule mod_arislickgallery}

the images path is in the module-settings (/images/2013)
it works fine..

but now i need a second page with arislick and another imagepath.... (/images/2014)

Are there any parameter to send the imagelocation?

~~
I tried modulesanywhere but overwriting parameters is not free :-(
any hints?

Thanky you!

Hello,

Create copy of the module, change path to images in it and load it.

Regards,
ARI Soft

You can use another plugin to load the module. For example "Module Plant" plugin, it can load modules by IDs.

Regards
ARI Soft

Im confused :)
Do you mean that i only can load a Module by Id or Name?
:)

_____

Modules can be loaded to module positions which are supported by site template. If you want to load it in another place (for example to an article), 3rd party plugins are used for this purpose (or "Content - Load Modules" standard Joomla! plugin). It is not clear what's wrong if module instances will be loaded by IDs? You can load two different module instances and show different images.

It has another ID. BTW, mod_arislickgallery is a system name. Name of module instance is defined in module settings.

I think we don't mean the same....

I load the module with {loadmodule mod_arislickgallery}
When i copy the module and rename it to "arislick2" the module name is still "mod_arislickgallery" - means it don't work :-)

Plant works but - it loads a scrollbar that i dont't need :(

You can read how to use "Content - Load Module" plugin here.

About "Module Plant" what's scrollbar do you mean? Where we can see the problem?

oh oh, :silly:
I can't see the wood for the trees :)

forget all - it work's fine - sorry :whistle:
