
Hide timer but continue automatic slider

Posted by communicat - 2011/04/06 09:12

Hi,

I want to hide the timer in Ari Orbit Slider. But when I set 'show timer' to 'NO', the pictures do not automatically slide anymore.

How can I continue the automatic slider without showing the timer? Does anyone know?

I think I have already found a solution for this, maybe not the perfect one but it works:

In mod_ariorbitslider - js - themes - default - style.css,
I changed the width 20px into 0px and height 40 px into 0px in span.mask as below:

```
span.mask { display: block; width: 0px; height: 0px; position: absolute; top: 0; right: 0; z-index: 2; overflow: hidden; }
```

Hello,

You can add the next code to "CSS Styles" parameter:

```
{ $id } .timer  
{  
  display: none !important;  
}
```

Thank you, this is a lot easier and better! My earlier solution doesn't keep the timer hidden entirely in IE.

Hello,
I have the same problem and will probably need the same solution but... I'm a beginner and don't know where exactly I should paste this code in the css... :
Code:

```
{ $id } .timer  
{  
  display: none !important;
```

}

Thanks a lot for helping!

Open module settings page and insert the code in "CSS Styles" parameter:

<http://www.ari-soft.com/images/fbfiles/images/orbit.jpg>
