
thumbnails not displaying

Posted by Gyurltrini - 2012/06/11 00:22

Hi! I'm new here and I installed ari orbit slider on a website for a client. On the development site it worked just fine, but on the live site it did not display the thumbnails. However it does display the images on click in the lightbox. Here's the test page of the live site: <http://wevibz.com/index.php/test> the specs correctly identify the directories for the thumbnails and the original files (I triple and quadruple checked this) and I can not determine any other problems except that I noticed it seemed to be trying to pull the thumbnails from the cache directory (which is writable btw.) although I had set the thumbnail directory to being another directory within the main image directory.

Hello,

Set writable permissions for /cache folder and clean Joomla! cache.

Thanks that worked!

Now I have another question ... my client wants to have the pop out come on mouse over instead of on mouse click ... is there any way to accomplish this?

The module doesn't support this ability.
