## ARI Orbit Slider with ARI Sexy Lightbox

Posted by vvdinden - 2012/11/02 11:37

---

Hi,

I use the Ari Orbit Slider module with an INI file for captions and I have chosen the Ari Sexy lightbox in the lightbox integration field.

What do I have to do to show the captions underneath the images in the lightbox? The INI file works well with the Orbit Slider and looks like this:

image1.png = "description here"

image1.png = "link here"

image1.png = "description here"

I know that it is possible to show the same captions in the lightbox because you show it on your demo page (<http://www.demo2.ari-soft.com/joomla-orbit-slider.html>), unfortunately without a description...

In the demo file source code I can see the images in the lightbox have a TITLE tag, i just don't know how to set the title for the images does it require a csv file too?

Thanks for your answer,  
Valerie

Hello,

Download and upgrade "ARI Orbit Slider" module. After this clean browser's cache. It should resolve the problem with title in the lightbox.

Regards,  
ARI Soft
