Slider operation Joomla 3.3.1

Posted by elecstix - 2014/07/22 16:02

_____

Since updating to php 5.4 and Joomla 3.3.1 our sliders are not operating as before.

We noticed that the CSS code is missing from the module parameters and although no errors are displayed we cannot get the parameters to save in the module configuration.

What should we be looking at? Have mailed a link if that helps.

Many thanks.

_____

Hello,

Download and upgrade the module.

Regards,
ARI Soft

_____

Module reloaded, version is 1.2.1 if that's correct.
All caches flushed. Don't think anything has changed. Where should we look next?

Sorry for the misunderstanding and thanks for the rapid response. Extension confirmed updated and all instances now re-parameterised with css successfully. Caches cleared and checked with different browsers.
I am afraid that the issue appears to remain - contact menu item demonstrates.

_____

It seems this problem with "swmenufree" module. It loads own copy of jQuery library instead of using jQuery instance which is loaded by Joomla! and it causes javascript conflicts.

OK, Thank you very much for your help in pointing us in the right direction.
We will investigate this and come back with anything useful.
