
Setup of flip book

Posted by Lehmkuhl - 2011/08/17 13:50

The module works fine however,

1 - I assumed the articles that appear in the book would be linkable and it seems it is not. There is no purpose to have articles displayed like this if they are not linkable. Have I missed something again? The only links that are working is the next and previous tabs.

2 - Close to the bottom of the articles in the book is a hairline running across the book. Can that be fixed?

Thanks.

1. Set "Overlay links" parameter to "No".

2. Could you provide link to page where we can see what you mean?

Hi, regarding the thin hairline - I discovered it is the "Show page numbers" which causes the problem. I set it to NO because I don't need page numbering now. So the problem is solved - although I think you should look into the matter in case someone else encounters a similar issue.

I do have another issue - When you open the menu where these modules are, it takes a second or three for the articles to appear in the flip box. It opens first with the whole article spread out over the page before it drops into the flip book. Can that be solved?

The link is <http://www.2grow.co.za/index.php/true-life-now>

Apart from that - It is a really great module! I love it. Thanks.

Hello,

We can add ability to show loading icon while page is loading. Is it suitable?

Just want to follow up on the possibility of adding a progress bar in Flip book. In South Africa we do not have fast internet connections in general and I think this is a major problem in this regard. That is the reason why an article is displayed accross the page before it is shown in flip book every time it is opened. It is annoying and if we cannot find a solution I would need to seek something else in stead. Hope you would be able to solve it.

Download and upgrade "ARI Flip Book" module please. New version of the module contains new parameter called "Show loading pane". Set this parameter to "Yes".

Regards,
ARI Soft
