## Two Flip modules in one site?

Posted by architector - 2012/06/04 20:56

---

Hi,

Is it possible to have more than one flipbook module in a site? I tried to set this up but can't get it to work. what I did was to:

- create a new module by copying the existing flip. Now got 'The Trap' and 'Later Than Now' modules.
- configured each to work with different category lists, and created articles in each list
- attached lists to two menu items.

What happens is that on both pages, two flip panels are being displayed, wuith neither working properly. I have obviously confused the modules. It would be really great to have more than one book previewed. Is it possible, any help gratefully appreciated (again).

Please see [www.peterdsowatskey.com](http://www.peterdsowatskey.com)

Kind regards

David

Hello,

We suppose this problem with "Position: " parameter on module settings page. Set it to fake module position. For example populate parameter with "flipbook" value.
