
Problem of display on iPhone 3

Posted by nogent - 2012/11/21 20:14

Good evening,

Can tell me to you why the DEPRESSION BOOK of your page dÃ©mo: <http://www.demo2.ari-soft.com/joomla-flip-book.html> is displayed well on an iPhone 3 and why mine, visible here : <http://www.dj-musicien.com/photossites/conception-sites-internet-creations-graphiques-pascal-revellin.html> is not displayed well.(only the first page appears and without possibility to turn the other pages and to visualize them?

Why this difference?

Cordially

Hello,

If you mean horizontal scrolling, it is the problem with site template styles. Add the following CSS rule to a site template CSS file to add horizontal scrolling:

```
BODY #art-main
{
  overflow-x: auto;
}
```

Regards,
ARI Soft
