
Sizing in percent ? Computer and smartphone

Posted by ETechs - 2013/05/09 17:19

Hello,

I've a problem with the Flip book module.

I want to use it in a website that can be visited via a computer, a netbook, or a smartphone, but when I'm browsing the website via a little screen, netbook or my smartphone, I can only see the left part or the flip book, the right part is in overflow and out of the Joomla main page.

Do you have a solution ?

Greetings

=====

Hello,

The extension doesn't support ability to use size in percent. It operates only with absolute values.

Can I do something to fit the flip book in the main page ?

The extension uses width and height which are defined in module settings. It doesn't change them.

I have already try this method, I can fit the flip book in the main page but I've to set the width to 450px, that's very small on a HD screen

We can adjust the extension and it will convert percent values of "Width" and "Height" parameters to absolute values on page load. Is it suitable for you?

Dear AriSoft.

is it now possible to change the flipbook adjusting width in percent? I am using FlipBook with completely responsive template (based on warp framework) and it would be awesome to use sth like size-auto in FlipBook.

Kind regards,

djembie

No, Etechs said nothing about this solution.

One note, size will be calculated only on page load, it will not be changed when browser's size is changed.

Could you please tell me, how to do this? It would be enough for me if FlipBook is loaded at page load with a max-width 100%.

Thanks a lot in advance!

Download and upgrade the module and set "Width" parameter in module settings to 100% value.

Could you provide a link to a page where we can see the book?

Regards,
ARI Soft

It is possible to set value of "Width" parameter using percent value. This value will be converted to absolute value on page load.
