## Separate images for front and back covers

Posted by 2GM - 2013/06/25 16:10

---

Hello-

I have made a custom style based on the default, and am using the covers setting with the book shown closed. I would like to use separate images for the front and back covers so that the spine appears on the correct side when closed. Is this possible? Right now both covers are using the same image file.

thanks!

Hello,

If you need CSS selectors for front and back cover, you can use ".b-page-1 .b-page-cover" selector for front cover and ".b-page-cover" for back cover.

Regards,  
ARI Soft

That works perfectly! Thank you so much.
