
trouble with links

Posted by floriano - 2014/01/05 16:25

Hi all,
I've got a problem with the module.. I am using it to link some images to their corresponding articles. So, I added the links to the csv file and it works, but when I open the link from the frontend, the new page (internal to the website) and the module itself are one on the top of the other with all of the images of the module scattered.
What am I doing wrong?
Here an exemple, please click on about any image apart "CAP"
http://www.tomasilineafuoco.it/index.php?option=com_content&view=article&id=501&Itemid=149

Many thanks

=====

Hello,

Could you send a link to CSV file and a screenshot where we can see the problem by email?

Regards,
ARI Soft

Hi there,
I am trying to do exactly what you've done - link each page of the flip book to another article on my site. This won't work for me. Can you let me know what you did to get this working?

Many thanks,
Kirstie

Hello,

Do you show images into a book and want to link them with articles?

Regards,
ARI Soft

Hello, I show images in a book and was hoping to link them to PDF? Is that possible?

many thanks
Kirstie

Links can be placed into CSV file. You can read about it in "Description" section on module settings page. Click "Detailed help here" link and it appears into a lightbox.
