
ARI flip book creates server error

Posted by zinny - 2014/01/21 17:27

Hello,

I create one of my domains new in joomla 2.5 in the moment.

I use your flip book for our member list and it works great for around 3 weeks. - But now , when I use the link "http://fantasy.ag-fantasy.de/index.php/mitglieder (members) the system creates an error.

I used your module on an article with :{ariflipbook moduleId="93"}{/ariflipbook}.

I discussed the problem with my provider. His opinion is to change the .htaccess file:

Options -Indexes

Options +FollowSymLinks

IndexIgnore *

I can't understand, that all was ok for weeks and now I should change a file.

Have you a nother possibility for me?

Thank you for Support

Bernd/ Potsdam

Hello,

Could you provide a temporary access to your J! backend by email so we can investigate the problem?

Regards,

ARI Soft
