
[Solved] Where is Module Class Suffix?

Posted by Fintan - 2014/04/17 07:29

I just downloaded the latest version of this great module for a responsive Joomla! 3.x.x site running bootstrap.

I tried setting the width to 100% and that sort of works on small mobile screens but then I have to set the height to a much larger height and this looks strange on the full DT Screen.

So I want this module to show only on full DT and set a link to the PDF file for small mobile devices.

To do this I have to add some code to : Module Class Suffix

hidden-xs hidden-sm

I cannot find the Module Class Suffix anywhere.

Here is a link to the test site:

<http://www.tajpalace-interlaken.ch/Test/index.php/our-menu>

Any suggestions?

Hello,

See the screenshot of module settings page below please:

Right! I must be going blind :unsure:

Edit: worked perfectly Thanks
