Template conflict ?

Posted by E.G - 2014/10/20 17:04
_____

Hello,

I'm trying to use Ari flip book but I have an issue with the layout as you can see here :
http://classe-v.com/index.php/cours-6e/item/89-chapitre-6-habiter-les-espaces-a-fortes-contraintes

How can I solve this ?

Thanks a lot,

EG

_____

Hello,

"Moleskine" theme can be used only with fixed values for "Width" and "Height" parameters. Set "Width" to 800 and "Height" to 500 or use "default" theme. This information is available in documentation on module settings page in "Description" section.

Regards,
ARI Soft

Sorry, I didn't see it in documentation. Thanks for your quick answer.
I just modified now but I still have some issues : http://classe-v.com/index.php/test-article
- no bottom appears
- in the middle the margins are strange

What have I to modify ?

Thanks for your help,

EG

_____

This problem with site template styles. Add the following CSS rule to "CSS Styles" parameter in module settings:

.afb-container,
.afb-container * {
  box-sizing: content-box;
}

_____

Great, it's perfect like this.
Two last questions :

- For moleskine_small, what are the width and the height ? I tried 530 and 330 and it seems ok.

- Last, I red on the forum that's possible to define width and height in %.
What I have to do ? Do I just add "%" at lines width and height ? (see attached files)
And does it function with moleskine or moleskine small ?

Again thanks a lot for your help,

_____

1. Use 540 x 333 size.

2. It is possible to use value in percent for "Width" parameter and it will be converted to absolute value on page load. It doesn't work with "Moleskine" theme because the theme works only with fixed values for "Width" and "Height" parameters.
