
Flipbook on directory content

Posted by cesarin - 2011/07/07 20:22

Hello, requesting something similar to the ARI LIGHTBOX where it can display gallery-like by reading a directory. but making a flipbook based on the content on a directory.

Example:

Directory A contains only JPG images of the same size.
the flipbook plugin pointing to this directory creates a flipbook containing all the images in order.

Also reading PDF files would be awesome as well.
