
Getting Ari Docs To Display Big Tables

Posted by alexr1090 - 2013/06/08 21:09

Hey first of all great extension for all who helped develop it. I believe I'll be using it on my site. The only problem I'm having so far is displaying all the fields in my large xls file. Ari Docs only wants to display the first 5 columns. It looks like Ari Docs uses Google Docs when I click the 'Open in new window' icon. In Google Docs it gives me an error saying that it can't display everything and asks me if I want to view it in their spreadsheet program. If I click the link the document is able to display. Is there some way to make it display the whole document without going to Google sheet viewer?

Hello,

Could you provide a link to a page where we can see the problem?

PS: The extension uses Google Docs service to show Excel files.

Regards,
ARI Soft

Unfortunately the site is still in development. I'll create a un and pw for you though so you can access it then I'll delete it when you're done. Ok so go to <http://www.casenetpro.com>

login: ***

pw: ***

go to my account -- my cases -- Example table

It seems this is a limitation of Google Docs service for embed Excel documents with a lot of columns.

Oh bummer. Is there any way to use google sheets service instead of google docs?

The extension can embed Excel documents only via Google Docs service.

ok thanks for clarifying. It might be a lot of work but I was thinking about editing the source to try to make it work. Do you think that would be possible?

You can load your document to Google Docs service, share it by a link and then load the document by shared link using "iframe" engine from "ARI Docs Viewer" plugin.
