
Ari doc and PDF

Posted by Mzungu - 2013/11/22 10:22

Madam/Sir,

I started using Ari Docs Viewer today.

Installation perfect, no problems.

Showing *.xlsx no problem.

PDF it keeps giving me an error message.

It tells it can't find the pdf file, see message.

The requested URL /*****/documenten/2013.pdf was not found on this server.

The PDF was made with a Mac. Can that be the problem?

The font in the PDF is not Verdana.

Size? pics in it?

Hope you can help.

Hans

Hello,

It seems this problem with WYSIWYG editor. Switch it to plain text mode and fix plugin code.

Regards,

ARI Soft
