
Can display be controlled to Portrait or Landscape

Posted by Romuba - 2016/02/08 10:01

I have installed ARI Doc Viewer and it works fine except for when displaying the document it changes the view winder to Landscape which means infor that should be on second page is now split between the first and second pages. Canl force the display to be only Portrait view?

See the problem at wpfba.co.za/files/results/chairman-league.html

Hello,

Sorry, but Google Docs API doesn't support ability to change document orientation.

Regards,
ARI Soft
