
Can't display a pptx file

Posted by ndubau - 2017/02/09 10:42

Hello
I just try your plugin to display in an article Joomla on our web space <http://pep83.org/66>. The syntax I used are
{aridoc engine="Office docs viewer" width="640"
height="480"}<http://pep83.org/images/pep2017/siege/ja23012017/siege23012017.pptx{/aridoc}>

{aridoc engine="google" width="640"
height="480"}<http://pep83.org/images/pep2017/siege/ja23012017/siege23012017.pptx{/aridoc}>

{aridoc engine="Office docs viewer" width="640"
height="480"}[images/pep2017/siege/ja23012017/siege23012017.pptx{/aridoc}](http://pep83.org/images/pep2017/siege/ja23012017/siege23012017.pptx{/aridoc})

Thanks for your help

Noel

Hello,

If you want to use "MS Office" viewer, populate "engine" parameter with "office" value:

{arid engine="office" ...

"Office docs viewer" is not a valid value for "engine" parameter.

I tried it too... but nothing appeared !
If I can't succeed I'll use another viewer.
Regards
NOEL

We checked the following shortcode on our test sever and it is working fine:

{aridoc engine="office" width="640"
height="480"}<http://pep83.org/images/pep2017/siege/ja23012017/siege23012017.pptx{/aridoc}>

Another problem perhaps exists... but just copied your code and nothing !
have a good day !

If you copy-pasted the code into a WYSIWYG editor then switch the editor to plain text mode before inserting the shortcode. In design mode editors can change inserted code.
