
office docs viewer

Posted by adinet - 2018/04/10 00:54

Hi, I am using ARI doc viewer as a means to embed an excel sheet into a K2 article via the extra fields in K2. On a PC it works perfectly and we have about 20 extra fields in the K2 template. The issue is on a Samsung Galaxy Tab 2 for example when you want to view the K2 document only the excel sheet is view-able and all other info from the K2 doc are not available. Any ideas how to remedy this. Cheers Adrian

Hello,

Is it possible to see the problem anywhere? What browser do you use?

Hi I use firefox app on the samsung pad. The excel sheet over rides the page and there is no way to scroll or anything. I have gone to embedding the excel sheet instead of direct insert, but it would be good to be able to do both. On a samsung phone I can scroll up and down if I set the page to 'request desktop view'. Cheers Adrian
