
Ari Data Tables select specific files

Posted by ilbadile - 2020/03/09 12:47

Hello,
i have a series of csv files generated with different dates but with the same name and structure in a specific folder. I need to be able to call the file by date and display it in a table on Joomla.
Is it possible to do it with Ari data tables and if so how?
Thank you

=====

Hello,

The extension doesn't support the described functionality. It is possible to pass CSV file name dynamically from PHP code to plugin code.

Regards,
ARI Soft
