
For use in smartphone

Posted by ecobladet - 2014/11/03 12:58

Hi!

We are having an issue with the reader in smartphones and reading on the forum I now understand that the API is not supported in the smartphone browsers. I don't see this as an issue though since I don't like the 2 page layout in smartphones anyways.

That being said, I would like to know if there is any way to make it show in single page layout in smartphone devices, either via CSS and with some modification and the JS? That would be awesome since it would really make it easier for the visitor!

Overall, thank you for an awesome extension! We really love it and if we could find a workaround in smartphones it would just be perfect! :)

Thank you in advance!

Hello,

Currently the extension doesn't support one page layout. We will implement this feature in a future version of the extension.

Regards,
ARI Soft

Thanks for the quick reply! Approximately when do you think that might be?

Ok, cool!

Will you be able to select that the onepage layout should only be active in mobile devices or will it be onepage only for all devices?

Do you think this version could be launched before the end of november?

Sorry for all the questions and thank you for amazing support!

"ARI Smart Book" v. 1.8.0 supports one/two pages layout and can switch between these layouts based on book width.

Regards,
ARI Soft

This is great news!

I have just installed the updated version 1.8.0 and made the following changes...

Templates settings, Book Settings, changed Page Display mode to Auto, I left the setting for Double page min width at 300

Browsing to the site on my iPhone in the vertical position, the book title and the controls (zoom, prev, next etc) show up, but the book page itself is missing, but if I turn my phone sideways, I do get the Two Page spread.

If I shrink the browser window to "phone size" the book page disappears as well.

Am I missing a setting somewhere? My books are all based on images.

Hello,

Try to set "Styles settings -> Show shadow" parameter to "Yes" in template settings.

Regards,
ARI Soft

Re:For use in smartphone

That worked, now the page appears.

I chose the Keep scale option, but that adds quite a bit of whitespace to either side of the image. Is there a way to make the image itself a bit bigger and not have the extra whitespace?
