
image sources stored in dB ?

Posted by pgarcia - 2015/01/23 14:05

Hi, I was wondering if it is possible to store pages information in database instead of CSV. Why have you choosen CSV ? is it more efficient, speeder ? I'm interested in using images as sources.

I would also like to ask if you have the service of adding functionalities like bookmars, or others.
It works really good the smartbook !

thank you !

Pedro

Hello,

The extension can create books based on Joomla! articles, K2 items, images from local folders and PDF documents which can be converted to images. If you want to create a book based on images, it is enough to specify path to folder(s) where images are located. CSV file is used only if want to add some extra fields which will be shown in the book. CSV file can be easily extended (add new fields for example).

Currently the extension provides ability to share publications in popular social networks. We are going to add ability to create bookmarks, share links for publication by email and etc.

Regards,
ARI Soft
