
Button for close window inside the book

Posted by TRIBU - 2015/06/12 16:27

Hi,

I need another little help. I want to insert a link in a page of book that go to a page of site and close the smart book window. Is possible?

Thank so much for your great work.

Hello,

Use the following link:

Close book

Regards,
ARI Soft

Hi,

the script is correct and the window closes, but the link at the page don't work. I insert the URL in href="link ecc", but the the window closes before that go to the url. I tried to insert the url after or before window.parent.SqueezeBox.close(); but the link still does not work.

I'm at few step to finish my work, but this little problem prevents me to finish.

If you want to open a link into a parent window, use the following code:

Close book

Regards,
ARI Soft

Sorry, but in this way don't work. We had already tried with target="_top", but I don't know why don't work.

This is the link

user vasapolli
pass Vasa2015

in the cover of flipbook there is the link Close book

<http://vasapolli.icona.it/index.php/e-store/esempio-flipbook-sommario4>

If you want to open a link into a parent window, it is enough to use the following link:

Close book

Regards,
ARI Soft
