
Responsive

Posted by PeerDesign - 2016/03/05 10:18

I've installed Ari Smart Book and made a book from a number of articles. It all works fine. I only don't know how to make it responsive. On the desktop it looks alright but on the smartphone it's not ok. The book is installed on:
<http://www.uilenhartjes.nl/index.php/nl/demovogels#page/1> Like to hear from you.

Kind regards

Peer

Hello,

As a solution it is possible to use one page book layout (instead of two pages) when width of the book is small. For this open template which is used for the book (see "Components -> ARI Smart Book -> Templates" page on Joomla! backend), open "Book settings" tab, set "Pages display mode" to "Auto" and specify minimum width which will be used for double pages layout in "Double page min width" parameter.

Regards,

ARI Soft

Thanks for the quick reaction. It works perfect now.

Kind regards,

Peer
